

## Task 10

### Project Idea Research & Planning

Name: Hana Mohamed Elsafty

#### PawMatch – Pet Adoption Website

##### 1. Project Idea

Project Name: PawMatch

PawMatch is a web application that helps people find and adopt pets from shelters. Shelters can list pets available for adoption, while users can browse pets, view their information, and apply for adoption.

---

##### 2. Project Description

###### Problem

People who want to adopt pets may find it difficult to find available pets and information about them in one place. Shelters also need an organized way to display and manage their pets.

###### Target Users

- People who want to adopt pets
- Animal shelters
- System administrators

###### Main Purpose

The main purpose of PawMatch is to connect potential adopters with shelters and make it easier to find pets available for adoption.

---

##### 3. User Roles

###### Admin

The admin manages the overall system.

Permissions:

- Manage users
- Manage pets
- Manage adoption requests
- Access the admin dashboard

###### Shelter

The Shelter manages pets available for adoption.

Permissions:

- Add pets
- View pets
- Edit pets
- Delete pets
- Upload pet images
- Manage adoption requests
- Access the shelter dashboard

###### Adopter

The Adopter is a user who wants to adopt a pet.

Permissions:

- Create an account
  - Login
  - Browse available pets
  - View pet details
  - Submit adoption requests
  - View their adoption requests
- 

##### 4. Main Features

###### Authentication

- Register
- Login
- Logout
- User accounts

###### Authorization

- Role-based access
- Different access for Admin, Shelter, and Adopter
- Protected pages based on user role

- Shelter dashboard
- Admin dashboard

#### **Pet Management – CRUD**

##### Create

- Add a new pet
- Enter pet information
- Upload a pet image

##### Read

- View available pets
- View pet details
- Search and filter pets

##### Update

- Edit pet information
- Update pet status
- Update pet image

##### Delete

- Delete a pet listing

##### Adoption Requests

- Submit an adoption request
  - View adoption requests
  - Manage adoption requests
- 

#### **5. Pet Information**

Each pet listing can contain:

- Pet name
  - Animal type
  - Breed
  - Age
  - Gender
  - Description
  - Adoption status
  - Pet image
- 

#### **6. Image Upload**

Pet Image

Allowed file types:

- JPG
- JPEG
- PNG
- WEBP

Maximum size:

- 5 MB

Uploaded by:

- Shelter
  - Admin
- 

#### **7. Database**

The application will use a database to store and manage the system's information.

Main entities:

- Users
- Pets
- Shelters
- Adoption Requests

The Pet entity will contain information such as the pet's name, type, breed, age, gender, description, status, and image.

---

#### **8. UI Design**

The application UI was designed using Figma.

The current design contains the following screens:

1. Home Page

The main landing page of PawMatch. It contains the navigation bar, introduction to the platform, and a button to browse available pets.

2. Browse Pets

Displays available pets using pet cards. Users can search and filter pets and open a pet's details.

3. Pet Details

Displays detailed information about one selected pet, including its image, name, breed, age, gender, location, status, and description. It also contains an Apply for Adoption button.

4. Login

Allows existing users to log into their PawMatch account using their email and password.

5. Register

Allows new users to create an account by entering their personal information, email, password, and selecting their user type.

6. Shelter Dashboard

Provides the Shelter with an overview of their pets, including total pets, available pets, pending pets, and adopted pets.

The dashboard also displays the Shelter's pet listings and actions such as editing or deleting pets.

7. Add Pet

Allows a Shelter to create a new pet listing by entering the pet's information and uploading a pet image.

---

**9. Figma Design Link**

PawMatch – Pet Adoption Website:

---

**10. Summary**

PawMatch is a planned full-stack pet adoption website that connects adopters with animal shelters. The system includes authentication, role-based authorization, pet CRUD operations, database management, image uploads, and adoption requests.

The UI design provides the main screens needed to visualize the application before starting the development stage.
